

EchoMind Magician's Guide v2.1

Welcome to Pocket Sorcery, the ultimate mentalism and prediction toolkit designed for use by magicians, performers, and mystery artists. This guide contains trick walkthroughs, performance scripts, and usage instructions for each of the embedded digital illusions.

Mind Reader

Enter a number or phrase secretly. Use verbal cues or muscle reading techniques to 'reveal' it. The reveal is prompted by the magician at the right time to simulate mental extraction.

Color Prediction

Ask a participant to pick a color. When they click a button, it always reveals your predicted outcome.

You can combine with physical color swatches or psychological forcing techniques.

Card Scroll Force

Spectator scrolls through an infinite deck. The forced card is subtly highlighted or landed on through scroll-position control. Great for ACAAN and prediction reveals.

Flashlight Reveal

Secret input is revealed via screen blinking simulating a Morse-code like reveal. Perfect for mystical, 'tech-enhanced' routines. Combine with spoken story for dramatic buildup.

Shake to Reveal

Secret is armed, then revealed only when the phone is shaken. Best used in borrowed-device routines or audience-involvement scenes where phone is handed to spectator.

Magic Calculator Force

Performer types or lets the spectator type an expression. The result will always come out to a preset force value. Great for lottery numbers, PINs, and number prediction stunts.

Settings + Magician Mode (Coming Soon)

You'll soon be able to toggle trick parameters: force values, default cards, color reveals, and voice scripting. Your magician profile will also track performance modes.
